1984 **ZENITH**
ADVANCED SYSTEM 3
THE SMART SET

THE QUALITY GOES IN BEFORE THE NAME GOES ON®

65 YEARS OF LEADERSHIP

**ZENITH QUALITY IS AMERICAN
QUALITY...RESEARCH...
ENGINEERING AND
MANUFACTURING EXPERTISE...**

Zenith's Long Tradition of Quality has been achieved by the dedication of its people over a span of 65 years. It is this dedication to quality without compromise that continues to make the difference in Zenith Color TV.

The Zenith Center, Glenview, Illinois, is where every Zenith Color TV begins its journey. Here, in Zenith's research and advanced development laboratories, new concepts become reality. The Zenith Center is the heart of Zenith. Here, Zenith's nationwide facilities are dedicated to creating and producing superior quality electronic products. These products require the highest quality components and these are the components used in putting together new Zenith Color TV. Here, standards are set to assure full Zenith quality. To assure that its quality standards are realized, Zenith now makes more and more of its own component parts.

American Manufacturing Expertise—at its Kostner Avenue facility in Chicago, Zenith makes all its own glass-base circuit boards...several million a year. The design comes from the Zenith Center. It's an automated process designed to meet Zenith quality standards. Each circuit board is 100 percent computer tested. These circuit boards are then made into electronic chassis modules.

Zenith's advanced microcircuit facility, at its Elk Grove, Illinois plant, develops the unique technology needed to manufacture laser-trimmed, thick film substrates, surface-wave filters and other ceramic and micro-electronic components. Computer controlled precision, American quality and advanced technology are the hallmark of this Zenith facility. Here Zenith people make little components to give Zenith a big lead in both performance and reliability.

Circuit boards from Chicago, advanced microcircuits from Elk Grove, resistors, solid-state devices, capacitors...all components are subject to exacting inspection and rigorous test to assure they meet the Zenith Center standards of quality.

Zenith's Module and Component Facilities in Reynosa and Matamoros, Mexico are highly automated. In these plants, components are automatically and accurately placed on modules. After the circuit boards are made into

All Zenith color TV sets—projection TV, consoles and portables—are assembled at the Springfield, Missouri plant, the hub of the Zenith quality system.

complete modules, Zenith designed and Zenith built computerized test devices analyze, adjust and test each module to make sure it meets Zenith's standards of quality.

Picture Tube and Electron Guns—at its Matamoros facility, Zenith has been producing electron guns for 10 years. Here, the guns are assembled in a laboratory controlled environment with filtered air and purified water. About 90 components and 80 people take part in producing a single electron gun. Critical tolerances must be maintained. Components spacing and alignment must be nearly perfect, with tolerances to plus or minus $2/10,000$'s of an inch. The Zenith Center electron gun design backed by the manufacturing skill in Matamoros combine to make Zenith's EFL® Electron Gun the finest in the industry. The electron guns from Matamoros are shipped to Zenith's Melrose Park, Illinois facility. Here Zenith makes all color picture tubes.

Manufacturing a picture tube is a highly complex procedure. For optimum performance and reliability, picture tube assembly and processing must be done in a laboratory controlled environment for the utmost cleanliness. The alignment of the electron gun inside the picture tube must be of the highest accuracy. Each step of this process is critical. The Zenith people at Melrose Park are experts. The tubes they produce make possible world famous Zenith picture quality.

Beautiful Cabinetry complements a beautiful picture. Zenith Color TV receivers feature fine-furniture cabinetry in a wide selection of decorator styles. Zenith's Evansville, Indiana plant is a custom furniture facility featuring the finest print process and wood finishing operations. Here, Zenith people craft with great care every furniture cabinet that is so important a part of Zenith Color TV. Zenith's Springfield, Missouri plant is where Zenith makes its own plastic cabinets with finishes and durability second to none. Starting with raw plastic pellets, each cabinet is molded, finished and tested right inside the Springfield plant by Zenith people...with Zenith quality control...American, of course.

Final Assembly—cabinets, picture tubes and sub-assemblies are now sent to Zenith's final assembly plant in Springfield, Missouri. Every Zenith Color TV set made is assembled in this American facility which is one of the most modern color television production facilities in the world. Every Zenith Color TV is carefully assembled, adjusted and tested to Zenith's high quality standards before being approved for shipment.

Zenith Quality Means Greater Value...Zenith quality means greater customer satisfaction. It is American quality...quality that is not just one thing...quality that is the sum total of many things. It is American research... American engineering... American quality control standards... American quality performance features... American manufacturing know-how... quality field testing... American, of course. All these things...and more...add up to the total performance that makes Zenith the greatest Color TV value...the quality that has made and continues to make Zenith Color TV "First Choice" in millions of American homes today.

Each Zenith color TV set undergoes rigorous performance and reliability testing for about four hours at the Springfield, Missouri plant.

THE QUALITY GOES IN
BEFORE THE NAME GOES ON®

1984 **ZENITH**

ADVANCED **SYSTEM 3** THE SMART SET

**THE COLOR TV
WITH A COMPUTER BRAIN**

New Zenith Computer Brain—all color TV sets are subject to progressive color imbalance or deterioration over a period of time and use. Because the red, blue and green electron guns of the picture tube age at an uneven rate, they may produce a faded, washed-out picture. In the past, correction of this condition required a tracking adjustment by a qualified service technician. Today, with Zenith's exclusive, new auto CRT tracking, the electron output of the color guns is automatically maintained at the original level throughout the life of the picture tube. Colors stay like new, year after year.

NEW ZENITH Z-TECH CHASSIS—More automatic circuits than any chassis in Zenith history. 100% modular design. Outstanding reliability.

Computer-controlled precision, space-age technology featuring state-of-the-art Large Scale Integrated Circuits (LSIs) combined with Zenith's traditional quality and expertise in research, engineering and manufacturing distinguish this remarkable chassis. The Zenith Z-Tech Chassis consists of a clean, uncluttered arrangement of modules. Each "complete-system" module is 100% pre-tested, 100% electrically aligned before final assembly. Every LSI is socket-mounted. Quick, easy, economical repair of these components may be made right in the home. The new Zenith Z-Tech Chassis features such important automatic circuits as:

New Computer Brain—a Zenith exclusive, described above.

New Zenith Patented Video Filter—removes excess picture static sometimes called "picture noise or snow." This should give you the kind of picture you want, even under weak signal conditions.

PRP Circuit—with 25% more picture detail. The Peak Resolution Picture Circuit reproduces up to 330 lines of picture resolution...25% more than ordinary TVs...to give you all the detail being transmitted, automatically.

178

New 178 Channel Tuning—select all VHF and UHF including 122 cable channels without converter (except scrambled channels). In Canada, 175 channels with 119 cable channels.

New Space Command® Remote Control—every Zenith Smart Set offers complete remote control tuning: Power ON/OFF, Channel Scan, Direct Channel Selection, Volume Control and Mute.

New On-Screen Channel and Time Display. Lets you check number of the channel you are watching and the current time.

New Remote Antenna Switch Accessory. Switch from normal TV to cable TV, even scrambled Cable TV, by remote control. Input up to 4 antenna sources with optional Antenna Switch.

New Timed-Entry Channel Selection. Press channel number on remote control, channel is automatically tuned without additional steps.

New Single Shielded UHF/VHF/CATV Input. Improves picture quality because it eliminates any pickup of interference (i.e., CB, Police, etc.).

New Magic-Touch Tuning. Features a "membrane" keypad control panel with quick response action. Just press pads on panel to activate desired functions. On selected models.

Advanced Space Phone. Place and receive phone calls through the TV with remote control. Whole family can join in. Available on selected models.

TRI-FOCUS PICTURE TUBE—Zenith's high-resolution EFL® Electron Gun has three focusing actions—instead of just one. It concentrates the electron beam

and produces a spot size that is smaller than is possible with guns used in most other systems today. The result: improved picture sharpness and enhanced highlight

detail. Zenith's EFL® Electron Gun is an in-line gun with the red, green and blue color guns aligned horizontally and the screen pattern consisting of color phosphor stripes. It maintains picture sharpness, even at high brightness levels for the sharpest Zenith picture ever.

ADVANCED COLOR SENTRY—Zenith's most sophisticated, automatic color control...think of it as a TV control room in your set. When ON, it controls the color picture...corrects the color picture 30 times a second...*automatically!* Color Sentry even changes the picture brightness as your room light changes, for more comfortable viewing. It does it all for you...*automatically!* Zenith's Color Sentry combines 8 essential

picture and color control sub-systems working together to bring you that great Zenith picture *automatically!*

New Redi-Plug—allows easy connection of accessories such as Teletext decoder, selected Cable TV decoders and broadcast Stereo TV adapter.

TOMORROW'S TV TODAY.

THE QUALITY GOES IN
BEFORE THE NAME GOES ON®

ZENITH QUALITY FEATURES

COMPUTER SPACE COMMAND® 4400 REMOTE CONTROL WITH ADVANCED SPACE PHONE.™

Features scanning of favorite programmed channels using the CHANNEL UP or CHANNEL DOWN button or channel selection using the numbered buttons, on the unit. Just press buttons to turn set on or off, make sound louder or softer through a continuous range, completely mute sound and recall channel number and current time on the picture screen.*

Turns Your TV Into a Telephone!

ADVANCED SPACE PHONE.™

Lets you make and receive phone calls without leaving your easy chair. The TV set is readily connected to any telephone line to function as a speaker phone. A sensitive microphone in the TV allows you to speak into the set from across the room while the caller's voice is

received through the TV speaker. The Advanced Space Phone feature lets the entire family take part in phone conversations. Another great convenience feature from Zenith.*

Only From Zenith...ADVANCED SPACE PHONE

AUTO-DIALING. The addition of Auto-Dial makes the Advanced Space Phone feature more versatile than ever. Now, two 13 digit telephone numbers can be programmed from the Space Command remote control unit. Once stored by the microprocessor in the Auto-Dial memory, these numbers can be recalled later and automatically dialed at any time.*

NOTE: The Advanced Space Phone operation may not be possible or feasible in some countries outside the U.S.A. Not for connection to party or coin lines. Advanced Space Phone described herein has been approved for use in most areas of Canada. Consult local telephone company for connection details.

Also From The World Leader In Remote Control TV. COMPUTER SPACE COMMAND® 3400 REMOTE CONTROL.

Features scanning of favorite programmed channels using the CHANNEL UP or CHANNEL DOWN button or channel selection using the numbered buttons, on the unit. Turn set on or off, make sound louder or softer through a continuous range, completely mute sound, recall channel number and current time on the picture screen.*

COMPUTER SPACE COMMAND® 2400 REMOTE CONTROL. Features UP/DOWN scanning of channels with the CHANNEL UP or CHANNEL DOWN button, or direct access channel selection using the numbered buttons, all on the remote control unit. Turn set on or off, make sound louder or softer through a continuous range and completely mute sound instantly while picture remains, press again to turn sound back on.*

COMPUTER SPACE COMMAND® 2200 REMOTE CONTROL. Same features as SC2400 Remote Control.

CHROMASHARP PICTURE TUBE—Features Zenith's Hi-Bi Electron Gun with high bipotential focusing action. In this system, the anode voltage and focus voltage applied to the electrodes of the gun form a high quality lens to focus the electron beam. Zenith's Hi-Bi Electron Gun is an in-line gun with red, green and blue color guns aligned horizontally and the screen pattern consists of color phosphor stripes. It's designed to provide outstanding picture sharpness and high-light detail.*

Z-1 CHASSIS—features Large-Scale Integrated Circuits (LSIs). Like all Zenith Color TV chassis, it is cool-running and 100% modular in design with a minimum of interconnections between modules. Chassis consists of a clean, uncluttered arrangement of modules. Its "complete-system" modules are 100% pretested and 100% electrically aligned before final assembly. Most of its integrated circuits are replaceable on the modules. This makes possible quick, easy, economical repair service right in the home, if necessary.*

178 CHANNEL CAPABILITY!†—All VHF/UHF INCLUDING 122 CABLE CHANNELS. Now you can select most available CATV channels without the need for an external converter (except scrambled programs). This 178 channel capability includes all normal VHF and UHF channels and 122 Cable channels... 110 midband, superband, hyperband and ultra-band channels as well as 12 high and low VHF band cable channels. Zenith's tuning system lets you select cable channels as easily as VHF and UHF.*

NOTE: Cable systems vary. Check your cable company for compatibility.

QUARTZ-CONTROLLED ELECTRONIC TUNING—ends, once and for all, the need for fine-tuning adjustments. It keeps the picture sharp and clear, not just when the set is new, but for years. Zenith's quartz-controlled electronic tuning system provides a high standard of tuning accuracy, reliability and ease of operation. Select any channel being telecast in your area with Remote Control unit or at the set. The computer selector instantly seeks out and locks on to the exact frequency. The entire system is quartz-controlled for the ultimate in precise, super-accurate tuning every time you select a channel. Because the tuners are electronic, they have no moving parts to corrode, wear or cause picture problems.*

THE QUALITY GOES IN BEFORE THE NAME GOES ON®

NEW TIMED-ENTRY CHANNEL SELECTION—press channel number buttons on Space Command Remote Control transmitter or at the TV keyboard and the channel will be automatically tuned in about three seconds. For immediate channel change, press channel number buttons and then the ENTER button.*

MAGIC-TOUCH TUNING—features a "membrane" keypad control panel with quick response action. Just press pads on panel to activate desired functions.*

KEYBOARD TOUCH-COMMAND—No channel set-ups or fine-tuning adjustments necessary. Just select any VHF, UHF or Cable TV channel being telecast in your area by using control panel keyboard.*

ONE-KNOB VHF/UHF—Select up to 12 VHF and 6 UHF channels. After fine-tuning, you dial both VHF and UHF channels.*

UP/DOWN CHANNEL SCANNING—of favorite programmed channels. A micro-computer "remembers" favorite channels, once programmed, for tuning ease and convenience.*

ON-SCREEN CHANNEL NUMBER AND TIME DISPLAY—channel number and time display will appear on picture screen for about 4½ seconds.*

STEREO AMPLIFICATION SOUND SYSTEM.*

STEREO POWER AMPLIFIER—for use with auxiliary program sources. Provides output of 5 watts minimum continuous RMS power per channel from 100 Hz to 10,000 Hz into 8 ohms with 2% or less total harmonic distortion, measured from auxiliary input to load.

STEREO CONTROL CENTER—with separate Bass, Treble and Balance controls plus a Hi-Filter switch and mode switches for AUX (auxiliary) STEREO/TV.

FOUR-SPEAKER SOUND SYSTEM—Round woofers reproduce low and mid-range tones and the crossover feeds highs to the tweeters for rich, dramatic sound. Two speakers on each side of cabinet give effect of sound surrounding the picture.

VIDEO MONITOR CAPABILITY.*

VIDEO/AUDIO INPUT/OUTPUT JACKS—for connecting optional receiver equipment to TV. These TV's can be used as conventional video monitors or source of video and audio signals for VCR. Sets can be used to monitor video cameras, video disc players, home video games, home computers and video cassette recorders—all without the need of an external modulator unit. They also allow you to listen to stereo sound from your modular, console stereo, stereo video disc player, stereo video cassette recorder units and other devices equipped with stereo sound through the four TV speakers, using the built-in TV stereo power amplifier. Also, the Video and Audio Jacks can be used as a recording source for video cassette recorders without tuners.

Electronic Power Sentry Voltage Regulator—Helps conserve energy and maintain stable voltage to the chassis at the receiver design level. Electronically self-regulating, it virtually eliminates the effects of household voltage variations to provide constant voltage, which makes improved component and picture tube life possible.

Chromatic One-Button Automatic Color Control—Blends color level and tint for lifelike flesh tones... assures greater color stability... accurately reproduces blacks and whites... maintains factory-set color level and tint... balances color to provide natural tints... prevents over-saturation of color.*

Picture Control—lets you adjust the color picture brightness for varying room light conditions.

Auto-Control Color System—once the picture has been adjusted, automatic color control circuits maintain accurate color, tint and contrast. Also, these special circuits blend color level and tint for lifelike flesh tones... and assure color stability.*

Super Video Range Tuner—82 channel system designed for ultra sensitive reception and selectivity. UHF tuner features Synchromatic 70-position UHF channel selector.*

VHF/UHF Perma-Set Fine-Tuning Control—featured on models with One-Knob Tuning System. Two-Knob Tuning System features VHF Perma-Set Fine-Tuning Control.*

Tone Control—permits proper balance of bass and treble response.*

Phase-Lock Loop Tuning—AFC Switch "locks in" signal for normal TV operation in NORM position. In SPCL (special) position, tuner "pulls in" off-frequency signals that may be received from Cable Antenna (CATV) systems, Master Antenna (MATV) systems or video games.*

Automatic Fine-tuning Control—locks in the signal for a sharp, clear picture from channel to channel.*

Digital True-Lock Picture Hold—locks in picture vertically and horizontally.

Automatic Fringe-Lock Circuit—provides superb picture stability and outstanding fringe area reception.

Sharpness Control—permits adjustment of picture detail to desired sharpness.

Zenith Quality Speakers—rich, full tone. Acoustically matched to cabinet. See Features Guides for speaker sizes.

VHF and UHF Antennas—detachable telescoping dipole VHF antenna. Clip-on bow-tie UHF antenna also provided. Provision for external VHF and UHF antenna connection.*

Provision for CATV/MATV Antenna Connection—75-ohm connector is built into the set for easy Cable (CATV) or Master Antenna (MATV) television hookup without need for a special adapter.*

Remote Antenna Switch Accessory—enjoy the convenience of remote control selection of broadcast TV, Cable TV, Pay TV, Video Cassette Recorder, Video Disc Player, Video Game or Home Computer without having to change cable connection. Optional at extra cost from your Zenith Dealer.*

Redi-Plug—every Zenith Chassis features an access port that allows easy connection of currently available and anticipated future development such as Stereo TV adapter, Teletext converter and selected Cable TV decoders.

See Feature Guides in this folder for availability of features on specific models.

*In Canada, 175 channel capability including 119 cable channels (107 midband, superband, hyperband and ultraband plus 12 VHF channels).

*On selected models.
